

## MC FA-4844 Pre-Swab Foaming Agent Treatment

### Foamer Additive Pays Big Dividends for Operator

#### BACKGROUND

Multi-Chem was contacted and asked to offer recommendations to control field operating costs due to liquid loading. Foaming agent was utilized in conjunction with swab rigs in order to unload effected wells quickly thus reducing overall swabbing cost.

#### ISSUES

Reservoir pressure is very low in coalbed methane wells being produced within this region of Canada. Each well could possibly have hundreds of meters of perforated interval. The well liquid loads and swab rigs are utilized throughout the field to control liquid and maintain gas flow to the surface. Wells have no tubing; therefore, most are completed with 4.5" casing.

#### ANALYSIS

MC FA-4844 is a weighted foamer as it is heavier than the water in the well bore and mixes readily in the wellbore. After initial flow treatments following batch applications, it was noted that the foaming agent was adequately dispersed into the water yielding excellent foam quality. Prior to the use of foaming agent, the swab rigs were only able to remove approximately 1/3 of the liquid from the wellbore with the rest migrating to the formation. The use of liquid foaming agent has enabled the well to be totally unloaded during the process. Normal application requires approximately 24 hours shut in to achieve optimum results.

#### RESOLUTION

The wells receiving pre-treatment of foaming agent prior to swabbing yielded two to three times the incremental gas flow to the surface and extended the flow rate dramatically between swabbing cycles. This is a result of the foamer laden fluid moving freely from the formation during the swabbing process which allows the well to be totally unloaded.

#### DELIVERED VALUE

Data gathered during the trial clearly shows the success of this program between the foaming agent added wells opposed to the wells without the added foaming agent in the wellbore.

Cost Analysis:  
 Swabbing unit on average: \$700 / well  
 Foaming agent per application: ~\$100

By extending the treatment intervals to twice as long and the increased gas of 2 decs/day yields an average increase net return to the customer of approximately \$12,000 in incremental gas increase and swab unit cost reductions per well.

Multi-Chem warrants to purchaser, but no third parties or others, the specifications for the product shall fall within a generally recognized range for typical physical properties established by Multi-Chem when the product departs Multi-Chem's point of origin and that any services shall only be performed in accordance with applicable written work documents. Purchaser agrees that Multi-Chem will give purchaser the benefit of Multi-Chem's professional judgment in making interpretations of data, but does not guarantee the accuracy or correctness of such interpretations. Multi-Chem's recommendations contained herein are advisory only and without representations as to the results. NO ORAL OR WRITTEN INFORMATION OR ADVICE GIVEN BY MULTI-CHEM SHALL CREATE A WARRANTY OR IN ANY WAY INCREASE THE SCOPE OF THE WARRANTY CONTAINED HEREIN. EXCEPT AS OTHERWISE SET FORTH HEREIN, THE PRODUCTS AND SERVICES ARE "AS IS" AND MULTI-CHEM MAKES NO OTHER WARRANTY OR GUARANTEE OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED, INCLUDING NO IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. PURCHASER AGREES THAT MULTI-CHEM SHALL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, EXEMPLARY OR CONSEQUENTIAL DAMAGES OR LOSSES FROM ANY CAUSE WHATSOEVER INCLUDING BUT NOT LIMITED TO NEGLIGENCE OR GROSS NEGLIGENCE.
