

## MC P-3920 Eliminates Severe Wax Deposition

Effective reduction in wax treating costs

### BACKGROUND

The well was being treated by a competitor monthly with no effective results. Any type of batch treating was determined to be ineffective.

### ISSUES

The paraffin deposition on this well required the customer to pull rods and steam the tubing every 3 to 4 weeks. Truck treating was not effective at reducing the problem.

### ANALYSIS

The well was experiencing severe paraffin deposition that would require something more than batch treating.

### RESOLUTION

A continuous treatment program was initiated using MC P-3290 with Kerosene at a 1 to 3 ratio, pumped at a rate of 3 gpd of MC P-3920 into the wellbore. This program has resulted in 112 days without having to pull any rods and with consistent oil production.

### DELIVERED VALUE

The customer has had a significant reduction in down time with no drop in production and a significant cut in rig and steamer expenses.

Multi-Chem warrants to purchaser, but no third parties or others, the specifications for the product shall fall within a generally recognized range for typical physical properties established by Multi-Chem when the product departs Multi-Chem's point of origin and that any services shall only be performed in accordance with applicable written work documents. Purchaser agrees that Multi-Chem will give purchaser the benefit of Multi-Chem's professional judgment in making interpretations of data, but does not guarantee the accuracy or correctness of such interpretations.
